Our Product

Experience a refined balance of style, privacy, and performance with Lucid Ceramic Architectural Window Films. Designed for modern residential and commercial environments, the Lucid range combines advanced ceramic technology with considered aesthetics to enhance comfort without compromising architectural intent.

Both Lucid Ceramic Black and Lucid Ceramic Dual Reflective deliver impressive solar performance, reducing heat, glare, and harmful UV exposure while maintaining clarity and natural light. Engineered to be compatible with dual-pane insulated glass, these films provide a sophisticated solution for spaces seeking efficiency, privacy, and visual restraint.

- **Enhanced Privacy**

Lucid Ceramic Architectural Window Films enhance privacy without compromising natural light. Designed to limit visibility from the exterior while preserving outward clarity, they create a comfortable, protected environment across residential and commercial spaces.
- **UV Protection**

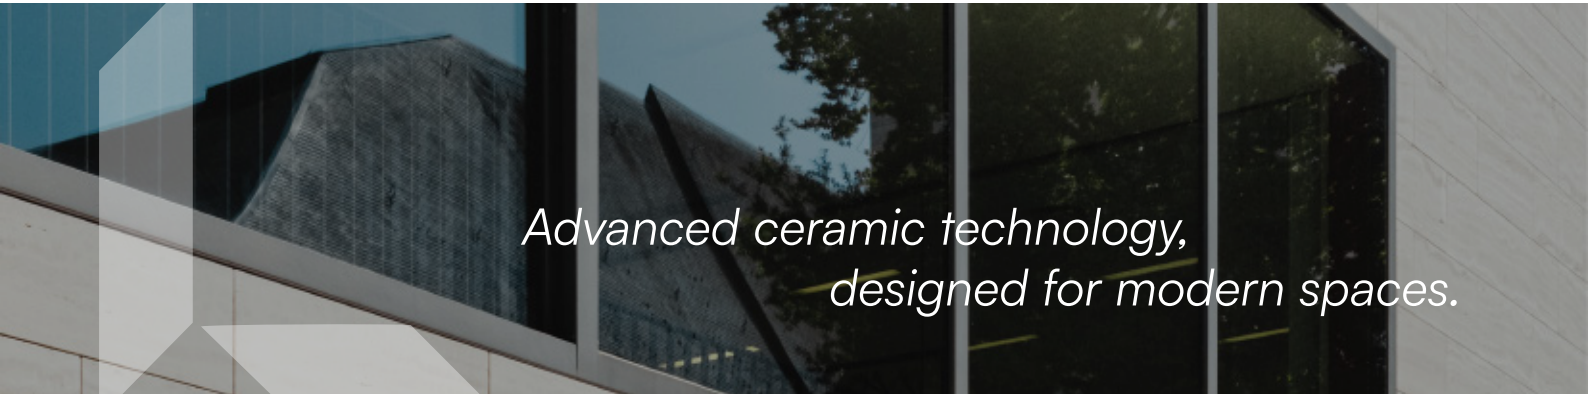

Engineered to block up to 99% of harmful UV radiation, Lucid Ceramic films help protect interiors from fading and sun damage. Furnishings, flooring, artwork, and finishes are preserved, extending their lifespan while maintaining a bright, balanced interior.
- **Glare Reduction**

Reduce harsh glare and excessive brightness for improved visual comfort. Lucid Ceramic films soften incoming light, helping minimise eye strain and improve screen visibility without darkening the space or disrupting its aesthetic.
- **Energy Efficiency**

By reducing solar heat transfer, Lucid Ceramic films support stable indoor temperatures year-round. This improves occupant comfort, lowers reliance on heating and cooling systems, and can contribute to reduced energy costs. Homes achieving a 5-star WERS rating may save up to 50% on annual heating and cooling energy.
- **Contemporary Aesthetics**

With a considered, architectural finish, Lucid Ceramic films complement modern building design. Whether opting for a non-reflective or dual reflective appearance, the result is a clean, refined look that enhances both exterior and interior presentation.
- **Easy Installation and Maintenance**

Designed for professional installation, Lucid Ceramic films are durable, long-lasting, and easy to maintain. Simple cleaning keeps the film performing and looking its best for years to come.

*Advanced ceramic technology,
designed for modern spaces.*

Lucid Ceramic Dual Reflective minimises interior reflectivity, while Lucid Ceramic Black offers a clean, non-mirrored finish for understated daytime privacy. Together, they offer design-conscious consumers the flexibility to achieve the right balance of performance and appearance across varied applications.

Backed by a lifetime limited residential warranty* Lucid Ceramic Architectural Window Films allow your windows to perform beautifully and reflect nothing but considered design.

Lucid Ceramic Black

Experience refined privacy and solar performance with Lucid Ceramic Black Architectural Window Film. Designed for contemporary residential and commercial spaces, this advanced ceramic film delivers a clean, non-reflective aesthetic while enhancing comfort and efficiency.

Utilising state-of-the-art ceramic technology, Lucid Ceramic Black provides excellent heat and UV rejection without the mirrored appearance of traditional films. The result is a sophisticated, understated finish that preserves natural light and outward visibility while reducing glare and interior heat build-up.

Compatible with dual-pane insulated glass and backed by a lifetime limited residential warranty*, Lucid Ceramic Black is the ideal choice for those seeking performance without compromise on design.

Lucid Ceramic Dual Reflective

For spaces that demand both performance and visual balance, Lucid Ceramic Dual Reflective Architectural Window Film offers a premium solution. Engineered to minimise interior reflectivity, this advanced film significantly improves nighttime visibility while maintaining a sleek, modern exterior appearance.

Its dual reflective design delivers impressive solar control, reducing heat and glare while supporting energy efficiency across residential and commercial environments. Crafted for design-conscious clients, it achieves the perfect harmony between functionality, comfort, and architectural intent.

Compatible with dual-pane insulated glass and supported by a lifetime limited residential warranty*, Lucid Ceramic Dual Reflective allows your windows to reflect refined taste and nothing else.

Quality Guarantee

Lucid Architectural Window Films are engineered to deliver lasting performance and refined aesthetics across residential and commercial spaces. Our comprehensive warranty reflects our commitment to quality and long-term reliability.

Our Window Films are covered against defects in materials for 10 years on commercial installations and for the lifetime of the original purchaser on residential installations. Should a product exhibit a manufacturing-related defect during the applicable warranty period, Lucid will, at its discretion, repair or replace the affected film.

This warranty ensures confidence in your investment, delivering enduring performance you can rely on for years to come.

- ✓ Premium ceramic construction for long-lasting durability
- ✓ Sleek black appearance enhancing any view
- ✓ Blocks out harmful UV rays
- ✓ Enhances privacy
- ✓ Helps keep the interior consistently cooler
- ✓ Available in multiple shades
- ✓ Combines style, functionality and privacy

How Window Film Works

When solar energy strikes untreated glass, the majority passes straight through into the space. Only a small portion is reflected or absorbed, often resulting in heat build-up, glare, and fading of interior furnishings over time.

Lucid Ceramic Architectural Window Films are designed to dramatically improve how glass manages solar energy. By rejecting a significant amount of total solar heat and blocking up to 99% of harmful ultraviolet radiation, these advanced films help protect interiors while improving comfort and visual clarity.

Once installed, window film transforms the way glass transmits, reflects, and absorbs sunlight. The level of performance and visibility is determined by the selected Visible Light Transmission (VLT), with higher VLT options remaining virtually undetectable, delivering powerful solar control without altering the look of your windows.
